Nouvelles Cliniques Nantaises
NANTES FRANCE
TYPE 001 LAD/DIAG CORONARY LESIONS
 Provisional T-stenting and kissing balloon in the treatment of coronary bifurcation lesions: Results of the French multicenter "TULIPE" study.

Brunel P, Lefevre T, Darremont O, Louvard Y.

14 French centers
186 patients: Zeta/Penta Stent on the main
1 stent: 66%
Final kissing: 96%
TLR: 15.88%
Tulipe study: treated lesions

Medina Classification

- MB (Distal)
- MB (Proximal)
- SB

Examples:
- 1,1,1
- 1,1,0
- 1,0,1
- 0,1,1
- 1,0,0
- 0,1,0
- 0,0,1
TYPE 001 LAD/DIAG CORONARY LESIONS
TYPE C TREATMENT FOR TYPE 001 BIF

• 2005 to 09/2006

• 42 type 001 (except Ostial LAD or CX)/4531 treated sites, 2393 patients

• 23 type C stents, success 95%, (1 failure to recross the distal part of the stent for kissing)
Conclusion

Type 001 Bifurcation treatment is not a frequent situation but technically more challenging (diameter differences)

Good results of type B treatment with BMS and DES

Application of this technique was successful

Compliance of the Taxus Liberté stent delivery system

Good acute results
